DROP-IN SERVICE

As part of our dedication to our key customer base we have recently started a weekly drop-in service for one of our large food manufacturing clients.

This weekly "clinic" enables engineers, stores, production, purchasing and maintenance to be able to discuss any queries or issues face-to-face. It has been really successful so far with a good number of attendees. We have been able to support with quote and order queries, presentation of product samples with the opportunity to also discuss upcoming projects and cost saving exercises.

PRODUCT CONVERSION

Working closely with a steel fabrication client, we have successfully been able to convert product selection as required by their customer.

We were able to support this client with our extensive product knowledge and expertise and convert from the existing product specification to the new one. This was required to adhere to standards at the end user's site and was achieved by reviewing the schematic diagrams of the machinery in question.

SPECIFICATION USING CAD

A client specialising in automated cutting for clothing, upholstery, composites, leather, automotive and technical textiles required a machine modification.

We supported with our technical expertise to work with them to find the most suitable solution from a number of possible options. We considered issues such as down-time and operator ergonomics to ensure safe use of the new modification to the machine.

LATEST NEWS

We opened our doors in October to students as part of the Chamber's Bradford Manufacturing Week initiative. With over 30 Year 10 students from different schools, we provided an insight into the world of engineering and manufacturing.

We are delighted to launch our new brochure, giving clients old and new the opportunity to take a closer look at TF Automation, our expertise and how we help and support clients. Get in touch for your copy.
